News from the Bioconductor Project

by Bioconductor Core Team

The Bioconductor project provides tools for the analysis and comprehension of high-throughput genomic data. Bioconductor 3.4 was released on 18 October, 2016. It is compatible with R 3.3 and consists of 1296 software packages, 309 experiment data packages, and 933 up-to-date annotation packages. The release announcement includes descriptions of 101 new packages, and updated NEWS files for many additional packages. Start using Bioconductor by installing the most recent version of R and evaluating the commands

```r
source("https://bioconductor.org/biocLite.R")
biocLite()
```

Install additional packages and dependencies, e.g., AnnotationHub, with

```r
BiocInstaller::biocLite("AnnotationHub")
```

Docker and Amazon images provide a very effective on-ramp for power users to rapidly obtain access to standardized and scalable computing environments. Key resources include:

- [bioconductor.org](https://bioconductor.org) to install, learn, use, and develop Bioconductor packages.
- A listing of available software, linked to pages describing each package.
- A question-and-answer style user support site and developer-oriented mailing list.
- The F1000Research Bioconductor channel for peer-reviewed Bioconductor work flows.
- Our package submission repository for open technical review of new packages.

Our annual conference, BioC 2017: Where Software and Biology Connect, will be on June 26 (‘developer day’), 27 and 28, in Boston, MA.
